Navy Year 2000 Tracking System (NY2KTS)
Software Release Notes
Version 2.1.7
12 January 1999

Software Change Description:

SCR #:	Description of Change

99-01   Passed a global variable to both forms Param_Claimant_Menu and Param_Claimant_Menu2 to pass the name of the report from the Facilities & Infrastructure Report Menu to their respective parameter forms so the user will always know what report they are running.

99-02   Changed the Y2K System Information Window (Y2K01U1) so that the user can now click on the Add Replacement System Name Button to add a new replacement system that does not already exist in the database.   The Replacement System Add Button and the Replacement System Name field are only activated when the users selects a Strategy of 'Replace System'.

99-03   Changed the Y2K Information Window (Y2K01U1) to display the descriptive text for the Interface Type vice displaying the code (i.e.: Navy, Marines, DoD).

99-04   Changed the Y2K Information Window (Y2K01U1) to display the Points of Contact (POC) Organization Department and the Commercial Phone Number for these individuals. This will better enable the user to determine the POC for this System when there are multiple POCs with the same name from different organizations.

99-05   Corrected problem with the Y2K Information Window (Y2K01U1) on the Interface Details Window where the user did not have to pick an Interface Type. This field is now mandatory and there is an option for Other.

99-06   Changed the version number and date on the Main Menu to version 2.1.7, dated 12 January 1999.
